

TPX™

RADAR DETECTOR 2.0

The best motorcycle-specific
radar and laser detector!

TPX™

RADAR DETECTOR 2.0

WHATS NEW IN VERSION 2.0

Thanks to a complete electronics overhaul, the TPX™ Version 2.0 now has blistering performance! Independent tests prove that the TPX™ 2.0 now ranks among the top performing detectors on the market. Along with this leap in performance, Version 2.0 also includes better false-alert-reduction logic, additional band lockout modes, and a more robust and versatile cable connection.

With the TPX™ System, there's no more trying to make automotive radar detectors work with your bike. No more missed alerts. No more hours of wiring jobs. No more fear of theft. No more microscopic buttons. The all new TPX™ Radar and Laser Detection System 2.0 has all the features you need with proven, top-notch performance.

SEE IT. HEAR IT.

When zooming down the open road with the wind in your face you can't hear much and you definitely don't want to take your eyes off the road. That's why we developed the Visual Alert and Wireless Headset as critical components of the system. Not just afterthoughts.

The Visual Alert is included with the System and can be mounted just about anywhere on your bike for optimal viewing. Its bright LED lights flash when radar and laser signals are detected so you don't have to take your eyes off the road. The optional Wireless Headset is compatible with most helmets and alerts you to detected radar and laser signals through its flat speaker that sits inside your helmet. With adjustable

volume settings, you'll be able to hear the alerts no matter how loud the ambient noise is. Even if you wear ear plugs!

KEY FEATURES

- Detects all police radar and laser bands
- Top-rated sensitivity
- 360° radar and laser protection
- Water resistant
- Vibration resistant
- Large, backlit, glove-friendly buttons
- Ultra-bright, adjustable LED alert included
- Daylight-visible, front-mounted, angled LCD
- Integrated quick-release plate and mechanism
- Compatible with any AdaptivMount™ or tech mount
- Wiring harness included
- Audio output jack for optional sound or communication system integration
- Optional wireless headset
- Optional auto mount kit
- Simple, plug-and-play installation
- Performance certified by leading independent test lab

COMPATIBILITY

The TPX™ System can be used on any motorcycle. It comes with a Quick-Release Mount Plate, which attaches to virtually any mount out there. Of course, we recommend using AdaptivMounts™.

Got a tinted windscreen? No worries. The TPX™ System will still sniff out radar and laser signals through them, even if they are heavily tinted. Got a sound system on your bike already? The TPX™ System features an auxiliary output port allowing you to hook it up to whatever sound system you've got. Heck, you can even run a wired headphone to it if you so choose to be tethered to your bike.

WHAT ELSE?

A lot! The TPX™'s water resistant construction helps protect it from brief rain showers. The System comes with a heavy duty wiring harness that easily connects to your bike's power source, making installation a breeze. Large buttons are designed so that you can operate it with riding gloves. Its top-positioned, angled, backlit LCD allows you to actually see the display from your riding position, day or night.

Vibration and shock resistant design ensures that it'll last on your bike. It is portable so you can take it with you on your lunch stop and don't have to worry about theft. It also means that you can use it on multiple bikes, and even your car (if you have one of those four-wheeled things).

CERTIFIED PERFORMANCE

All these features are great for motorcycle use, but does it really work? You bet! The TPX™ System detects ALL police radar and laser bands. But don't take our word for it. The System is certified by Speed Measurement Laboratories, Inc., the leading independent evaluator of radar detectors in the market today.

The TPX™ had to go through a rigorous performance evaluation in order to earn this prestigious certification. A more important measure of the TPX™'s success though is our thousands of happy (and ticket-free) customers. Just search your favorite motorcycle forums and you'll see how much people love the TPX™ System.

GLOWRIDER™ ELECTRO-LUMINESCENT JACKET

It's a fact: we are less visible than cars on the road. We are even less visible when it's dark out. That's why we developed the GlowRider™ Electro-Luminescent Motorcycle Jacket.

The GlowRider™ jacket integrates patented and patent pending Electro-Luminescent (EL) technology directly into the jacket. With the push of a button, EL panels on the back and shoulders light up to significantly increase your night-time visibility.

Powered by a rechargeable lithium battery hidden in the sleeve, the EL panels will glow for 10+ hours on a full charge. So you can ride all night and still be seen.

THE ALL NEW ADAPTIVMOUNT

Vibration is bad. It tends to rattle things out of place and wear things down. Vibration is especially bad when it breaks things that are not designed to withstand it, such as your GPS, cell phone, MP3 player, camera, radar detector or that other expensive gizmo that you have mounted on your bike.

This is why we created the AdaptivMount™. The AdaptivMount™ is specifically designed to minimize the vibration transferred from your bike to your gadget with the patent-pending AdaptiSorb™ Anti-Vibration Technology.
